

Alarming Statistics

- 20-30% of American children are overweight or at risk of becoming overweight!
- Children aged 2-18 spend an average of 4 hours a day watching television, playing video games, or using a computer.
- Obese children and adolescents are more likely to become obese adults.
- Type 2 Diabetes (previously known as an adult disease) has dramatically increased in children and adolescents.
- Only one in five children get the recommended servings of fruits and vegetables each day.
- Nearly half of young people do not regularly engage in vigorous physical activity.
